- 2) Log In Page
- 3) Main Menu Page
- 4) Task Progress Page
- 5) Weekly Timetable Page
- 6) Schedule Task Page
- 7) Task Menu Page
- 8) Timer Page
- 9) Diary Page
- 10) AI chatting page

Our Objective

Task-oriented Virtual pet system:

For university students who are introverted or value their privacy, seeking out a mentor or traditional mental health support can be intimidating. A virtual pet system offers a private, low-pressure way for these students to manage their mental health. It provides a safe, non-judgmental companion that helps them track their mood, express emotions, and practice self-care, all without needing to open up to others. This makes it an ideal solution for students who prefer to stay private while still getting the support they need.

CORE TECHNOLOGIES

- Java - All app logic and functionality
- XML - UI layouts and design
- Text Files - Database storage (offline)
- Google AI Studio - Chatbot feature

KEY JAVA FILES

- LoginActivity.java - User authentication
- MainMenuActivity.java - Pet progress & main dashboard
- TimerActivity.java - Task timing functionality
- DiaryActivity.java - Mood tracking & journaling
- ChatActivity.java - AI conversation
- FileManager.java - All data read/write operations

DATABASE FILES

- user_data.txt - Login credentials
- pet_progress.txt - Virtual pet evolution
- tasks_log.txt - Task completion records
- diary_entries.txt - Daily mood & journal

EXTERNAL LIBRARIES

- MPAndroidChart - Progress visualization
- CalendarView - Weekly timetable
- Google AI API - Mental health chat support

**Thank you for
attentive listening!**
